

DockSpeed

Whitepaper v1.0

PVP PLAY TO EARN GAME

Abstract

“Speed Token” was created to facilitate the purchase of project-specific NFT’s which facilitate competitive gameplay time on the DockSpeed racing platform. Purchasing a DockSpeed car to race, or parts to improve car performance, is achieved through owning its NFT. Owning the car allows a player to race and earn Speed Tokens from beating competitors that place bets on their driving skills. Race rewards paid out from the racing on the platform are also paid out in Speed Token. Speed Token is the entry ticket to the DockSpeed Metaverse

DockSpeed Racing

DockSpeed will launch with a suite of NFT race cars that are ready to race when purchased. NFT cars and parts are essential to gameplay on DockSpeed and always verifiable on-chain. The platform will offer one racetrack at launch where players can practice their racing skills, and later place bets on winning races in a PvP competition. Further development will produce more tracks and gameplay popularity grows

>>>

Utility & Investment

The DockSpeed racing platform was designed to enhance and incentivize a gaming experience that millions of gamers already love and understand. The concept of owning the car through an NFT purchase is an investment with salable and scalable value. The concept of developing a skill that can earn you money, through betting Speed Tokens on your races, is an outlet for a true growth storyon both the token and the depth of the DockSpeed platform

Investment in Speed Token is a massive opportunity to take a piece of a technological marriage of gaming and the user's willingness to put their skills to the test for personal gain. Adopters of the game are also investors that receive long-term passive income through staking. As users of the platform increase, their gameplay funds further car, part and track development. A massive token moonshot story is within reach.

State of the Market

NFT's are exploding and that's likely why you're here looking to play and invest. These digital assets are minted artwork where ownership is verified on a trusted and transparent blockchain. Providing utility to collectible artwork is the genius and strategy conceptualized by our team of developers. Invest, collect and appreciate the value of your NFT cars and parts by developing your racing skills.

This model is groundbreaking and is an opportunity to get into a niche market that will grow exponentially over the coming years

The growth story of online gameplay needs very little explanation. Online gambling is another market that's exploding. We've cornered the market by creating a credible platform that taps into every aspect of what makes a product hot and current to market trends. Our packaged product will further broaden the market by bringing in various non-crypto investors who seek an enhanced experience with a higher degree of stimulus.

As gamers race their NFT based cars, play and bet to win, DockSpeed's platform will grow in its development and market share; it's proprietary Speed Token will appreciate in value through demand for access to this incredible business model

Player vs Player gameplay and betting available upon V1 release.

5000 LIMITED cars of 7 types to choose from that offer a personalized racing experience. All uniquely available through their minted NFT purchase.

Multiple player pools to join the gameplay experience based on skill and personal preference for risk of Speed Token bet placement.

Various racetracks in development to broaden game atmosphere and player skills.

Various gamer control options allowing gamers to use familiar handheld controllers to navigate the vehicle to the best of their ability

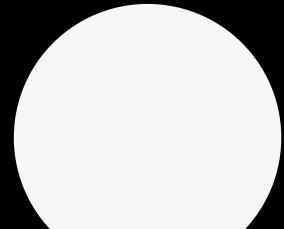

Gameplay Features

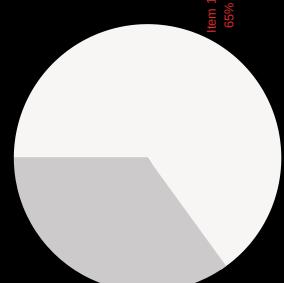

Achieving VIP status allows you to become a DockSpeed Super Host! Playing and improving your driving skills will give you tournament hosting permissions! Host your own competition with your favorite drivers and play for Speed Tokens! Finally, a place where your friends and competitors can put their money where their mouth is!
